

Author Rights and Process

In accordance with major funder mandates, the ACM OPEN model provides a default Creative Commons CC-BY license for each eligible research article. Although CC-BY is the default author license under ACM OPEN, the participating author does have the choice to choose any of the Creative Commons license options, or to transfer copyright or exclusive publishing rights to ACM if they so wish.

To be sure that their article is accepted for ACM OPEN, authors at ACM OPEN participating institutions should be sure to use their institutional email domain when submitting the article for review and for author rights choice after acceptance. Institutional email domain is the primary means by which ACM is recognizing author affiliation for ACM OPEN, so **we request that authors do not use a generic private domain such as gmail.com or yahoo.com, etc.**

Also provided in the ACM OPEN license is the automatic deposit of all research articles published by the ACM OPEN-licensed institution into its non-commercial institutional repository. This provision includes all such articles published OA in their final published Version of Record ("VOR") form, and all other articles not yet published OA in their "Accepted Manuscript" form. It is envisioned that eventually all future research articles will be deposited in their VOR form once ACM has reached 100% OA research publishing sustainability.

Creative Commons is a nonprofit organization that provides standardized global licenses to grant copyright permission for creative and academic works. The CC-BY license is the most liberal reuse license provided by Creative Commons, and allows reusers to distribute, remix, adapt, and build upon the material in any medium or format, provided attribution is given to the creator.
